

## **ANTHRACITE 9005**

### **ELASTIC BELT**

Elastic webbing is used in the structures of the outdoor sofas with raised seating. This provides a high level of comfort and, at the same time, excellent protection from humidity, mold and the effects of weather in general. The webbing employed by Flexform is made of high intensity rubber cord (with greater than 90% natural latex content), covered with polypropylene fiber. The properties of these materials ensure exceptional elastic durability over time. Care: the elastic webbing can be easily cleaned with a soft cloth dampened with water and pH-neutral soap. Extended exposure to the sun can, however, cause changes in color; to avoid this happening, cover the products with their respective covers when not in use for long periods of time.
